USE-CASE CATALOG · 2026

What can your cameras do for you?

42 ways to put AI to work on the cameras you already have, across security, traffic, retail, industry and the outdoors. All run on one platform.

How to read this catalog

Every idea carries an honest rating of how ready the technology is today, based on published results. We confirm real numbers on your own site during a pilot.

Ready now

12

Proven technology. Works well in good conditions.

Needs site tuning

22

Works, but results depend on your cameras and site. We tune it during the pilot.

In research

8

Promising but not yet reliable enough to act on alone. Ask us before planning on it.

FEATURED marks our lead solutions, each with its own solution sheet.

Safety & Security

Protect people and property, around the clock.

13 IDEAS

Fire & Smoke Detection

FEATURED

Spots flames and smoke on camera, often before a ceiling detector reacts.

Needs site tuning — Fog, steam and dust can look like smoke.

Perimeter Watch

FEATURED

Alerts when someone crosses a fence or a line they shouldn't.

Needs site tuning — Tuned per site for weather, distance and animals.

Loitering Detection

Someone staying too long in one spot, like an ATM or back door.

Needs site tuning — The right time limit depends on the place.

Left Bag / Package

Flags bags or boxes left alone in a public area.

Needs site tuning — Busy, cluttered scenes are harder.

Fall Detection

Detects when a person falls, for care homes and hospital rooms.

Ready now — Cluttered rooms need extra tuning.

Face Mask Check

Checks whether masks are worn where they are required.

Ready now — Side angles lower accuracy.

Crowd Size

Warns when too many people gather in one place.

Needs site tuning — Very dense crowds are hard to count exactly.

Tailgating

More than one person walking through a door meant for one.

Needs site tuning — Camera angle matters a lot.

Fight Detection

Spots violent behaviour so staff can step in early.

Needs site tuning — Rough play can look like fighting.

Knife Detection

Looks for knives in view of the camera.

Needs site tuning — Small objects at a distance are hard.

Lost Child Alert

A child alone with no adult nearby for a set time, in a mall or park.

In research — Age estimation from video is still unreliable.

Shoplifting Detection

Flags suspicious behaviour at shelves.

In research — Behaviour is harder to judge than objects.

Gun Detection

Looks for firearms on camera.

In research — Not offered until proven on real CCTV footage.

Traffic & Vehicles

Gates, roads, car parks and fleets.

12 IDEAS

Licence Plate Reading

FEATURED

Reads plates and keeps a searchable log of every vehicle.

Ready now — Needs a well-placed camera; rain and dirt lower accuracy.

Vehicle Counting

How many vehicles pass, and when: traffic flow at a glance.

Ready now — Heavy congestion lowers accuracy.

Parking Spot Checker

Shows which spaces are free or taken, live.

Ready now — Needs occasional re-checks as cameras drift.

Vehicle Type Sorting

Car, truck, bus or motorbike, logged automatically.

Ready now — Works best with a clear view of the vehicle.

Helmet Check

Checks that motorbike riders wear helmets.

Ready now — Distance and other headgear can confuse it.

Speed Check

Estimates vehicle speed on private roads and yards.

Ready now — Depends on careful camera calibration.

Tag-Based Vehicle Tracking

Tags on vehicles for exact position and speed in yards and fleets.

Ready now — Tags must stay clean and visible.

Bad Parking

Illegal or double parking, blocked exits and fire lanes.

Needs site tuning — Other vehicles can block the view.

Red-Light Running

Vehicles passing a stop light or barrier when they shouldn't.

Needs site tuning — Needs precise camera setup.

Wrong-Way Driving

Vehicles going the wrong way on a ramp or one-way road.

Needs site tuning — Field results vary; we test on site.

Crash Detection

Spots collisions on roads or in yards.

In research — Crashes are rare, so training data is scarce.

Seatbelt Check

Checks seatbelt use through the windscreen.

In research — Glare and different car interiors are hard.

Retail & Business

Understand your store and serve customers faster.

5 IDEAS

People Counting

How many people came in, by hour and by entrance.

Ready now — Groups walking close together are harder.

Queue Length

Warns when the line gets too long, so you can open another till.

Needs site tuning — Telling waiting from passing takes tuning.

Footfall Heatmap

Shows where customers walk and stop in the store.

Needs site tuning — Multi-camera stores need extra setup.

Empty Shelf Alert

Tells staff when a shelf needs restocking.

Needs site tuning — Lighting and angle affect results.

Checkout Check

Flags items that were not scanned at the till.

Needs site tuning — Alerts are reviewed by staff before action.

Factory & Workplace

Keep workers safe and sites compliant.

4 IDEAS

No-Go Zone Check

FEATURED

Alerts when someone enters a danger zone, like around a machine.

Needs site tuning — Zones are drawn and tested per site.

Safety Gear Check

Hard hats, safety vests and gloves where they are required.

Needs site tuning — Distance and lighting make a big difference.

Tired Worker Detection

Signs of drowsiness in drivers and machine operators.

Needs site tuning — Best for fixed positions like cabs.

Spill / Leak Detection

Liquid on floors, or leaks from pipes and tanks.

In research — Works better with thermal cameras.

Environment & Public Space

Farms, parks, cities and open land.

6 IDEAS

Crop Health Check

Spots problem areas in fields from drone footage.

Ready now — Cloud cover and growth stage matter.

Animal Intrusion

Animals entering farms, reserves or roads.

Needs site tuning — Small or distant animals are harder.

Flood Water Level

Tracks rising water levels in rivers and channels.

Needs site tuning — Water looks different by season and light.

Factory Smoke / Emissions

Watches chimneys and stacks for visible smoke.

Needs site tuning — Steam and shadows can confuse it.

Illegal Dumping

Catches rubbish being dumped where it shouldn't be.

In research — Still being validated in real conditions.

Graffiti / Vandalism

Spots new graffiti or damage on walls and property.

In research — Can confuse street art with vandalism.

General Monitoring

The building blocks behind many solutions.

2 IDEAS

Smart Motion Detection

Motion alerts that ignore shadows, trees and changing light.

Ready now — Basic motion sensors can't do this; AI can.

Area Watch

FEATURED

Know when people enter or are present in a zone you choose.

Needs site tuning — Tuned for distance, angle and weather.

NEXT STEP

Don’t see your idea?

If a person can spot it on a camera, there is a good chance our platform can learn to spot it too. Tell us what you want to watch for and we will tell you honestly how ready it is.

1. Tell us what you want to detect
2. We check it on your footage
3. Pilot on a few cameras
