MOBIUS TENSORS SOLUTIONS

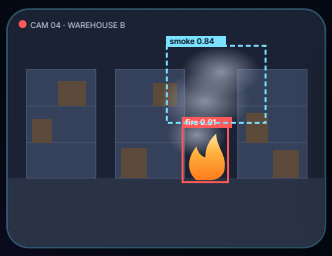

AI VIDEO ANALYTICS

AI that watches your cameras, so your team doesn't have to.

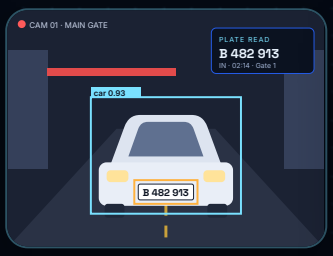

Turn the cameras you already own into a smart safety and security system.

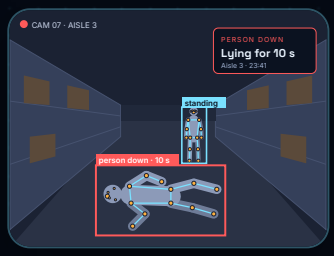

Perimeter & Zone Watch

Fire & Smoke Detection

Licence Plate Reading

Person Down & Activity

THE PROBLEM

Your cameras see everything. Nobody watches everything.

Most sites have dozens of cameras and a few people watching screens. Incidents are often found hours later, by scrolling through a recording.

Histor adds AI to the cameras you already have. It watches every feed, day and night, and tells you only when something that matters happens: someone in a restricted area, smoke in a warehouse, a car at the gate.

WITHOUT AI	WITH HISTOR
Staff watch a wall of screens	Every feed watched, 24/7
Most feeds go unseen	Only real events reach your team
Incidents found on the recording, later	Alert with a snapshot, as it happens

One system, many jobs

We built one AI system that we set up for your site. Need fire detection today and car-park monitoring next year? Same system, new module. No new project, no new hardware.

INSIDE THIS DOCUMENT

Overview 1
Perimeter & Zone Watch 3
Fire & Smoke Detection 4
Licence Plate Reading 5
Person Down & Activity 6
Use-Case Catalog 7

HISTOR

MOBIUS TENSORS

HOW IT WORKS

From camera to alert in four steps

1

Connect

We plug into your existing IP cameras: Hikvision, Dahua, Reolink, Uniview, Axis or any RTSP camera.

2

Detect

AI spots people, vehicles, smoke, flames and plates in real time, and follows each one across the frame.

3

Decide

Your rules: which area, which hours, how long someone may stay before it counts.

4

Alert

You get the event with a snapshot on the dashboard, by email, or inside your existing security system.

OUR SOLUTIONS

Four solutions, one system

Perimeter & Zone Watch

Alerts when someone crosses a fence line, enters a restricted area or stays too long.

page 3

Fire & Smoke Detection

Spots flames and smoke on camera, often before a ceiling detector reacts.

page 4

Licence Plate Reading

Reads plates at gates and car parks, with a searchable log of every vehicle.

page 5

Person Down & Activity

Alerts when someone stays down, and remembers what everyone was doing.

page 6

WHY HISTOR

- ✓ **Keep your cameras.** No rip-and-replace.
- ✓ **No special hardware to start.** Runs on a standard server; add a GPU only when you grow.
- ✓ **Your video stays on site.** Nothing has to leave your building.
- ✓ **Fewer false alarms.** Rules are tuned to your site, not a generic setting.
- ✓ **Grows with you.** Add cameras, sites and detections any time.

GETTING STARTED

1 **Talk**
We walk your site with you, list the cameras and agree what counts as an alert.

2 **Pilot**
We connect a handful of cameras and run the system on your real footage. We measure hits and false alarms together.

3 **Roll out**
Add cameras, sites and new detections as you need them, on the same system.

BUILT FOR

Warehouses · Factories · Retail · Car parks · Schools · Hospitals · Residential compounds · Farms

Try it on your own cameras

Start with a short pilot on a few cameras at your site.

MOBIUS TENSORS

SOLUTION SHEET · SECURITY

Perimeter & Zone Watch

Know the moment someone crosses the line.

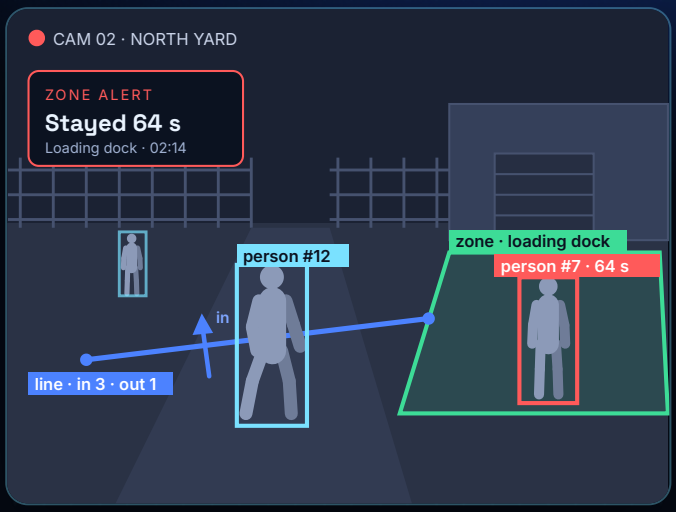

Illustration of an alert: a virtual line (blue), a watched zone (green) and every person tracked.

THE PROBLEM

Fences, gates and restricted rooms are covered by cameras that nobody is watching. Simple motion sensors go off for wind, shadows and animals, so people learn to ignore them.

WHAT IT DOES

Draw a line or an area on any camera view. The system follows every person and vehicle and alerts you when one crosses the line, enters the area, or stays longer than you allow.

HOW IT WORKS

1. **Draw** Mark a line or area on the camera view.
2. **Track** Each person and vehicle gets an ID and is followed.
3. **Check** Your rules decide what counts.
4. **Alert** Event with time, direction and snapshot.

WHAT YOU GET

Virtual tripwires
Alert when a line is crossed, and in which direction: in or out.

Restricted zones
Enter and exit alerts for any area you draw, any shape.

Stay-too-long timer
e.g. a car parked more than 60 seconds in a fire lane.

People or vehicles
Choose what matters. Ignore the rest, including animals and trees.

Counting
How many people or cars went through a gate, in and out.

One intruder, one alert
A cooldown stops the same event from flooding your team.

WHERE IT'S USED

Perimeter fences at night · Restricted rooms · Loading docks · Fire lanes · Site gates · Construction sites

Good to know

Works best with a clear view and decent light. At night, IR cameras or lighting help a lot. We tune lines, zones and timers on your real footage during the pilot.

Try it on your own cameras

Start with a short pilot on a few cameras at your site.

HISTOR

MOBIUS TENSORS

SOLUTION SHEET · SAFETY

Fire & Smoke Detection

See smoke on camera, before the alarm goes off.

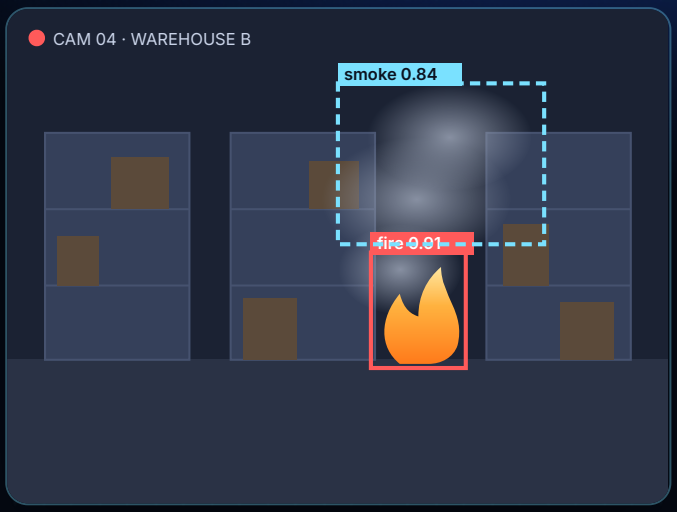

Illustration of an alert: flames and smoke found and marked on a warehouse camera.

THE PROBLEM

Ceiling smoke detectors only react once smoke reaches them. Under high warehouse roofs or in open yards that can take minutes, or never happen at all.

WHAT IT DOES

The system looks for flames and smoke in your camera views and sends an alert with a snapshot, so your team can check and act straight away.

HOW IT WORKS

1. **Watch** Every camera, day and night.
2. **Spot** AI finds flame and smoke regions.
3. **Confirm** Seen over several frames, not a single flash.
4. **Alert** Snapshot to your team in seconds.

WHAT YOU GET

Flames and smoke
Detects both, so you get warned in the early smoky stage too.

Snapshot with every alert
See what the camera saw and decide fast.

Fewer false alarms
An alert needs the detection to hold over several frames.

Covers open spaces
Yards, high roofs and car parks where detectors struggle.

Uses your cameras
No new sensors to install on the ceiling.

Works with your alarm
An extra early warning, not a replacement for certified systems.

WHERE IT'S USED

Warehouses · Factories · Parking garages · Recycling and waste yards · Farms and forest edges · Fuel and gas depots

Good to know

Steam, fog and dust can look like smoke, and very thin smoke is harder to see. We set thresholds on your own site during the pilot. This is an early-warning layer that works alongside your certified fire alarm.

Try it on your own cameras

Start with a short pilot on a few cameras at your site.

HISTOR

MOBIUS TENSORS

SOLUTION SHEET · ACCESS & TRAFFIC

Licence Plate Reading

Every vehicle at your gate, logged and searchable.

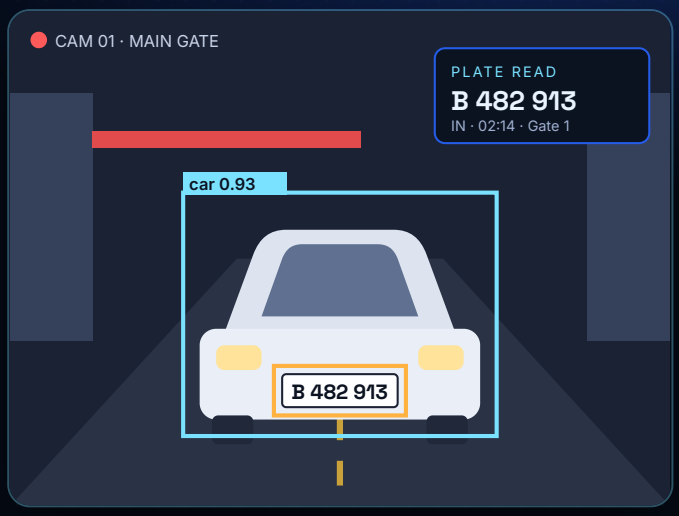

Illustration of a gate camera: the vehicle is found, then its plate is read and logged.

THE PROBLEM

Guards write plates down by hand, or not at all. When something happens, finding which car came in at 2 a.m. means hours of scrolling through footage.

WHAT IT DOES

A camera at your gate or car park entrance. The system finds each vehicle, reads its plate and saves the plate, time, direction and a snapshot in a log you can search.

HOW IT WORKS

1. **Find** Spot the vehicle and its plate.
2. **Read** Turn the plate into text.
3. **Log** Save plate, time and snapshot.
4. **Act** Search the log or get alerts.

WHAT YOU GET

Plate reading
Plate text saved as searchable data, not just video.

Searchable history
Find any plate, any day, in seconds.

In and out
Know which way each vehicle went at the gate.

Vehicle type
Car, truck, bus or motorbike, saved with each record.

Watch-list alerts
Get told when a plate you care about shows up.

Data stays with you
Records live on your own server. You set how long they are kept.

WHERE IT'S USED

Residential compounds · Company car parks · Logistics yards · Fuel stations · Hotels · Private roads

Good to know

Accuracy depends on camera placement: angle, distance and IR light at night. Rain, fog and dirty plates lower it. We advise on camera position before the pilot. Plate records are personal data in many countries, so they stay on your server.

Try it on your own cameras

Start with a short pilot on a few cameras at your site.

HISTOR

MOBIUS TENSORS

SOLUTION SHEET · SAFETY

Person Down & Activity

Know when someone falls, and what everyone was doing.

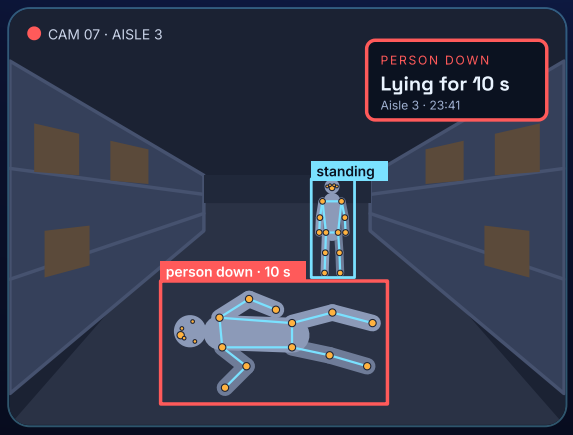

Illustration of an alert: 17 body points on every tracked person, about once a second.

THE PROBLEM

A worker collapses in an empty aisle, a guest slips on the stairs at night. Cameras see it, but nobody is watching that screen, and finding it later means hours of scrubbing.

WHAT IT DOES

Histor reads the body of every person it tracks: standing, sitting, crouching or lying, hands up or down, and the colour of their top and trousers. It alerts you when someone stays down, and remembers the rest so you can ask about it later.

HOW IT WORKS

1. **Track** Each person gets an ID and is followed.
2. **Read the body** 17 points: head, shoulders, elbows, wrists, hips, knees, ankles.
3. **Remember** Posture, hands and colours are stored whenever they change.
4. **Alert or answer** Someone down for 10 s is an alert; any question later gets an exact answer.

WHAT YOU GET

Person down
Alert when someone stays lying for 10 seconds, with a snapshot.

Hands up
Both hands held above the head for 3 seconds, at a till or a desk.

Posture history
Seconds standing, sitting or lying, per person and per visit.

What they wore
Main colour of the top and of the trousers, from 11 colour names.

Ask in plain words
"Did anyone fall in the warehouse last night?" "A red top and blue jeans?"

Stays on site
Runs on your own server, on CPU; a GPU is optional. No face recognition needed.

WHERE IT'S USED

Warehouses · Lone and night workers · Care homes · Stairs and car parks · Retail tills · Construction sites

Good to know

People need to be at least 80 pixels tall in the picture. Colours are lost at night on infrared cameras. Histor is an extra pair of eyes, not a medical alarm: we test person-down on staged falls at your site, and agree the false-alarm level with you, before it goes live.

Try it on your own cameras

Start with a short pilot on a few cameras at your site.

USE-CASE CATALOG · 2026

What can your cameras do for you?

37 ways to put AI to work on the cameras you already have, across security, traffic, retail, industry and the outdoors. All run on Histor, on your own server.

How to read this catalog

28 of 37 ideas are ready to deploy today.

Every idea carries an honest rating of how ready the technology is today. We confirm real numbers on your own site during a pilot.

Ready out of the box

11

Proven technology. Works as soon as it is installed.

Ready, set up on site

17

Works today. During installation we calibrate it to your cameras, angles and lighting.

In research

9

Promising. We test it on your own footage before promising anything.

FEATURED marks our lead solutions, each with its own solution sheet.

Safety & Security

Protect people and property, around the clock.

11 IDEAS

Fall Detection

Detects when a person falls, for care homes and hospital rooms.

Ready out of the box — Works in care rooms, corridors and halls.

Face Mask Check

Checks whether masks are worn where they are required.

Ready out of the box — Best with a front-facing camera.

Fire & Smoke Detection

FEATURED

Spots flames and smoke on camera, often before a ceiling detector reacts.

Ready, set up on site — We calibrate it for fog, steam and dust at your site.

Perimeter Watch

FEATURED

Alerts when someone crosses a fence or a line they shouldn't.

Ready, set up on site — Tuned per site for weather, distance and animals.

Loitering Detection

Someone staying too long in one spot, like an ATM or back door.

Ready, set up on site — We set the time limit that fits each place.

Left Bag / Package

Flags bags or boxes left alone in a public area.

Ready, set up on site — Tuned to how busy your area is.

Crowd Size

Warns when too many people gather in one place.

Ready, set up on site — We set the limit for each area during setup.

Tailgating

More than one person walking through a door meant for one.

Ready, set up on site — We help you place the camera at the right angle.

Lost Child Alert

A child alone with no adult nearby for a set time, in a mall or park.

In research — Age estimation from video is still unreliable.

Shoplifting Detection

Flags suspicious behaviour at shelves.

In research — Behaviour is harder to judge than objects.

Gun Detection

Looks for firearms on camera.

In research — Not offered until proven on real CCTV footage.

Traffic & Vehicles

Gates, roads, car parks and fleets.

12 IDEAS

Licence Plate Reading

FEATURED

Reads plates and keeps a searchable log of every vehicle.

Ready out of the box — We advise on camera placement at gates and barriers.

Vehicle Counting

How many vehicles pass, and when: traffic flow at a glance.

Ready out of the box — Counts every arrival, day and night.

Parking Spot Checker

Shows which spaces are free or taken, live.

Ready out of the box — Spots are drawn once, then it runs on its own.

Vehicle Type Sorting

Car, truck, bus or motorbike, logged automatically.

Ready out of the box — Cars, trucks, buses and motorbikes.

Helmet Check

Checks that motorbike riders wear helmets.

Ready out of the box — Works at entrances and on site paths.

Speed Check

Estimates vehicle speed on private roads and yards.

Ready out of the box — Calibrated once at installation.

Tag-Based Vehicle Tracking

Tags on vehicles for exact position and speed in yards and fleets.

Ready out of the box — Works with visible vehicle tags.

Bad Parking

Illegal or double parking, blocked exits and fire lanes.

Ready, set up on site — We map your parking rules and no-parking areas.

Red-Light Running

Vehicles passing a stop light or barrier when they shouldn't.

Ready, set up on site — We set up the camera and stop line precisely.

Wrong-Way Driving

Vehicles going the wrong way on a ramp or one-way road.

Ready, set up on site — Tested on your road or ramp before go-live.

Crash Detection

Spots collisions on roads or in yards.

In research — Crashes are rare, so training data is scarce.

Seatbelt Check

Checks seatbelt use through the windscreen.

In research — Glare and different car interiors are hard.

Retail & Business

Understand your store and serve customers faster.

3 IDEAS

People Counting

How many people came in, by hour and by entrance.

Ready out of the box — Counts people in and out, per door and per hour.

Queue Length

Warns when the line gets too long, so you can open another till.

Ready, set up on site — Tuned to tell people waiting from people passing.

Empty Shelf Alert

Tells staff when a shelf needs restocking.

Ready, set up on site — Set up for your lighting and shelf layout.

Factory & Workplace

Keep workers safe and sites compliant.

4 IDEAS

No-Go Zone Check

FEATURED

Alerts when someone enters a danger zone, like around a machine.

Ready, set up on site — Zones are drawn and tested per site.

Safety Gear Check

Hard hats, safety vests and gloves where they are required.

Ready, set up on site — Placed and tuned for your distances and lighting.

Tired Worker Detection

Signs of drowsiness in drivers and machine operators.

In research — Needs a camera facing the operator, like in a driver cab.

Spill / Leak Detection

Liquid on floors, or leaks from pipes and tanks.

In research — Works better with thermal cameras.

Environment & Public Space

Farms, parks, cities and open land.

5 IDEAS

Animal Intrusion

Animals entering farms, reserves or roads.

Ready, set up on site — Tuned to the animals and distances on your site.

Flood Water Level

Tracks rising water levels in rivers and channels.

Ready, set up on site — Calibrated to your river or channel through the seasons.

Factory Smoke / Emissions

Watches chimneys and stacks for visible smoke.

Ready, set up on site — Calibrated to tell smoke from steam and shadows.

Illegal Dumping

Catches rubbish being dumped where it shouldn't be.

In research — Still being validated in real conditions.

Graffiti / Vandalism

Spots new graffiti or damage on walls and property.

In research — Can confuse street art with vandalism.

General Monitoring

The building blocks behind many solutions.

2 IDEAS

Smart Motion Detection

Motion alerts that ignore shadows, trees and changing light.

Ready out of the box — Basic motion sensors can't do this; AI can.

Area Watch

FEATURED

Know when people enter or are present in a zone you choose.

Ready, set up on site — Tuned for distance, angle and weather.

NEXT STEP

Don’t see your idea?

If a person can spot it on a camera, there is a good chance Histor can learn to spot it too. Tell us what you want to watch for and we will tell you honestly how ready it is.

1. Tell us what you want to detect
2. We check it on your footage
3. Pilot on a few cameras
