SAME PLATFORM, MORE JOBS

Beyond the first three

Every new use case is a new module on the system you already have, not a new project.

Safety
Fall detection for care homes and hospitals, loitering alerts, left bags and packages.

Workplace
Hard-hat and safety-vest checks, no-go zones around machines, spill spotting.

Retail
People counting, queue length, empty-shelf alerts, footfall heatmaps.

Traffic & parking
Vehicle counting and type, free parking spaces, helmet checks for riders.

Outdoor & farms
Animal intrusion, flood-level watch, illegal dumping.

Ask for our **Use-Case Catalog** — 40+ ideas, each rated by how ready it is today.

GETTING STARTED

Start with a pilot

See it work on your own cameras before you commit.

1. **Talk**
   We walk your site with you, list the cameras and agree what counts as an alert.
2. **Pilot**
   We connect a handful of cameras and run the system on your real footage. We measure hits and false alarms together.
3. **Roll out**
   Add cameras, sites and new detections as you need them, on the same platform.

What the pilot gives you

- ✓ Real results on your own site, not a demo video
- ✓ A clear count of hits and false alarms
- ✓ Rules tuned to your cameras and hours

ARGUS

AI VIDEO ANALYTICS

AI that watches your cameras, so your team doesn't have to.

Turn the cameras you already own into a smart safety and security system.

THE PROBLEM

Your cameras see everything. Nobody watches everything.

Most sites have dozens of cameras and a few people watching screens. Incidents are often found hours later, by scrolling through a recording.

Argus adds AI to the cameras you already have. It watches every feed, day and night, and tells you only when something that matters happens: someone in a restricted area, smoke in a warehouse, a car at the gate.

WITHOUT AI	WITH ARGUS
Staff watch a wall of screens	Every feed watched, 24/7
Most feeds go unseen	Only real events reach your team
Incidents found on the recording, later	Alert with a snapshot, as it happens

One platform, many jobs

We built one AI platform that we set up for your site. Need fire detection today and car-park monitoring next year? Same system, new module. No new project, no new hardware.

HOW IT WORKS

From camera to alert in four steps

1. **Connect**
   We plug into your existing IP cameras: Hikvision, Dahua, Reolink, Uniview, Axis or any RTSP camera.
2. **Detect**
   AI spots people, vehicles, smoke, flames and plates in real time, and follows each one across the frame.
3. **Decide**
   Your rules: which area, which hours, how long someone may stay before it counts.
4. **Alert**
   You get the event with a snapshot on the dashboard, by email, or inside your existing security system.

Live output from our detection engine: each person is found and labelled with a confidence score.

OUR SOLUTIONS

Three solutions, one system

Perimeter & Zone Watch

Alerts when someone crosses a fence line, enters a restricted area or stays too long.

Fire & Smoke Detection

Spots flames and smoke on camera, often before a ceiling detector reacts.

Licence Plate Reading

Reads plates at gates and car parks, with a searchable log of every vehicle.

Why Argus

- ✓ **Keep your cameras.** No rip-and-replace.
- ✓ **No special hardware to start.** Runs on a standard server.
- ✓ **Your video stays on site.** Nothing has to leave your building.
- ✓ **Fewer false alarms.** Rules are tuned to your site, not a generic setting.
- ✓ **Grows with you.** Add cameras, sites and detections any time.

BUILT FOR

Warehouses · Factories · Retail · Car parks · Schools · Hospitals · Residential compounds · Farms
