ARGUS

Perimeter & Zone Watch

Know the moment someone crosses the line.

Real output from our platform: a virtual line (blue) and a watched zone (green).

THE PROBLEM

Fences, gates and restricted rooms are covered by cameras that nobody is watching. Simple motion sensors go off for wind, shadows and animals, so people learn to ignore them.

WHAT IT DOES

Draw a line or an area on any camera view. The system follows every person and vehicle and alerts you when one crosses the line, enters the area, or stays longer than you allow.

HOW IT WORKS

1. **Draw** Mark a line or area on the camera view.
2. **Track** Each person and vehicle gets an ID and is followed.
3. **Check** Your rules decide what counts.
4. **Alert** Event with time, direction and snapshot.

WHAT YOU GET

Virtual tripwires
Alert when a line is crossed, and in which direction: in or out.

Restricted zones
Enter and exit alerts for any area you draw, any shape.

Stay-too-long timer
e.g. a car parked more than 60 seconds in a fire lane.

People or vehicles
Choose what matters. Ignore the rest, including animals and trees.

Counting
How many people or cars went through a gate, in and out.

One intruder, one alert
A cooldown stops the same event from flooding your team.

WHERE IT'S USED

Perimeter fences at night · Restricted rooms · Loading docks · Fire lanes · Site gates · Construction sites

Good to know

Works best with a clear view and decent light. At night, IR cameras or lighting help a lot. We tune lines, zones and timers on your real footage during the pilot.

Try it on your own cameras

Start with a short pilot on a few cameras at your site.
