SOLUTION SHEET · ACCESS & TRAFFIC

Licence Plate Reading

Every vehicle at your gate, logged and searchable.

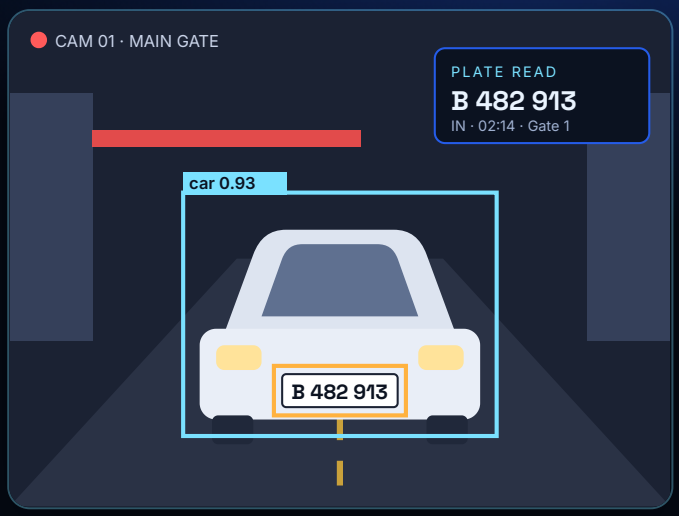

Illustration of a gate camera: the vehicle is found, then its plate is read and logged.

THE PROBLEM

Guards write plates down by hand, or not at all. When something happens, finding which car came in at 2 a.m. means hours of scrolling through footage.

WHAT IT DOES

A camera at your gate or car park entrance. The system finds each vehicle, reads its plate and saves the plate, time, direction and a snapshot in a log you can search.

HOW IT WORKS

1. **Find** Spot the vehicle and its plate.
2. **Read** Turn the plate into text.
3. **Log** Save plate, time and snapshot.
4. **Act** Search the log or get alerts.

WHAT YOU GET

Plate reading
Plate text saved as searchable data, not just video.

Searchable history
Find any plate, any day, in seconds.

In and out
Know which way each vehicle went at the gate.

Vehicle type
Car, truck, bus or motorbike, saved with each record.

Watch-list alerts
Get told when a plate you care about shows up.

Data stays with you
Records live on your own server. You set how long they are kept.

WHERE IT'S USED

Residential compounds · Company car parks · Logistics yards · Fuel stations · Hotels · Private roads

Good to know

Accuracy depends on camera placement: angle, distance and IR light at night. Rain, fog and dirty plates lower it. We advise on camera position before the pilot. Plate records are personal data in many countries, so they stay on your server.

Try it on your own cameras

Start with a short pilot on a few cameras at your site.
